Here is the discussion forum for this part of the course. Please either post your comments/observations/questions or share your creations.

Let us suggest some topics of discussion and optional projects:

SUGGESTED TOPICS

- If you find interesting drag and drop examples on the Web, please share them in the forum.

- What example(s) would you like to be added in the course (drag and drop of files is covered in the next lesson)?

OPTIONAL PROJECTS

- Make a nice demo with drag and drop, and share them in the forum. For example, try to add something similar to the "what is your preferred fruit" or "what is your preferred browser" to a form.

- Or order a set of images by drag and dropping them. A sort of picture gallery, you drag and drop one picture (an `<img>` element), drop it at another location in the gallery (a grid), and the other picture will move to give some room for the picture you dropped.
